Lebanon High School Addition:
- This 10,000 square foot addition includes a new science classroom, general purpose classrooms and a physical health classroom and will allow the district to accommodate the growing high school student population.
- A reworked vehicular entry drive will improve safety and access to the building.
- Construction on this project began the week of October 20 and is expected to conclude in time for the addition to be used at the start of the 2015-2016 school year.

Bowman Primary School Addition:
- This 16,000 square foot addition will provide 13 additional classrooms and additional restroom facilities. These additional classrooms will primarily allow the Kindergarten and Pre-K programs to move to Bowman from their current location in Louisa Wright Early Childhood Center. The new classrooms will also provide additional space for grades 1 and 2.
- Site improvements will facilitate drop-off and pick up for the Kindergarten and Pre-K students and also add dedicated playgrounds for Kindergarten and Pre-K.
- The entire existing Bowman Primary school is receiving new roofing, and a new computer lab is also being created in an existing room within the school.
- Construction on this project began the week of October 20 and is expected to conclude in time for the addition to be used at the start of the 2015-2016 school year.

Donovan Elementary School Addition and Renovation:
- The 21,000 SF addition to Donovan Elementary School will provide the additional classroom space needed to eliminate the exterior “modular” classrooms that are currently being used to accommodate the student population at this school. Additionally, the existing school will be renovated to upgrade the heating and cooling system, lighting, and technology systems.
- Design on this project is currently underway with construction expected to begin in Spring of 2015. The building will remain partially occupied during construction with some Donovan students being relocated to temporary facilities for portions of the construction. Project completion is planned in time for the start of the 2016-2017 school year.

Berry Intermediate School Addition and Renovation:
- Berry Intermediate will undergo a complete renovation. Heating systems, lighting, technology, flooring, ceilings and furniture will be replaced and air conditioning will be added. The existing, outdated industrial arts portion of the building will be demolished and a 1,500 square foot addition will be built.
- The exterior front façade of the building will be preserved.
- Design on this project is in its very earliest stages. Construction is expected to start in Summer of 2016 once the New Junior High School is complete. Completion of the New Junior High School will allow the Berry students to occupy the existing Junior High School for the 2016-2017 school year while Berry is renovated. Project completion is planned in time for the start of the 2017-2018 school year.
